Amazon API Integration

How It Works - At a Glance

Green Circle Certified
PointSolve Technology Inc.
March 2026 | v1.0

Amazon pulls certification data from GCC automatically. You don't send anything to Amazon.

Your analysts enter certificate data as normal. The API handles the rest.

1 Analyst Creates Certificate
Enters cert details, selects Partner = "Amazon", adds ASINs

→

2 Cert Goes Active
Moves through workflow to Active status

→

3 API Makes It Available
Automatic - no action needed. Only Active certs are visible.

→

4 Amazon Retrieves Data
Amazon calls the API with their key and gets cert + ASIN data

What Your Analyst Does

- **Select Partner = "Amazon"** on the certificate
- **Add ASINs** (Amazon product IDs) to the certificate
- **Enter Certification Results** (optional) - the test score or threshold achieved (e.g., "95.5% recycled content")
- **Select Pathway** (optional) - e.g., "Energy usage reduction"
- Complete the certificate through the normal workflow

What Happens Automatically

- API **only shows Active** certificates - drafts/expired are hidden
- Amazon's API key **only sees Amazon-tagged** data - no other partner data
- **All security is built in** - encrypted, filtered, rate-limited
- Amazon maps ASINs to their product listings
- Eligible products receive the **Climate Pledge Friendly** badge

What Data Amazon Sees

Data	Example	Source
Certificate Number	24-0366	Automatic
Company Name	EcoProduct Co	Analyst enters
Product Name	Recycled Paper Towels	Analyst enters
Certification Type	UL 2809	Analyst enters
ASINs (Product IDs)	B08XQRT456, B08XQRT789	Analyst enters
Certification Results	95.5% recycled content verified	Analyst enters (optional)
Issue / Expiration Dates	2024-01-15 to 2025-01-15	Analyst enters
Status	Active	Automatic
Certificate PDF	Downloadable link	Automatic

About Certification Results: This is an optional free-text field where the analyst enters the specific test outcome (e.g., "32% energy savings" or "95.5% recycled content"). Amazon may use this to verify Climate Pledge Friendly thresholds. If you're unsure what to enter, leave it blank - it can be added later.

Common Questions

Q: Do we need to send files or data to Amazon?

A: No. Amazon pulls data from us automatically using their API key. You just enter the certificate normally.

Q: Can Amazon see certificates for other partners (like Novi)?

A: No. Their API key only shows certificates tagged with Partner = "Amazon". Complete data isolation.

Q: What if a certificate expires or gets revoked?

A: It automatically disappears from the API. Amazon only sees Active certificates.

Q: What are ASINs?

A: Amazon's product ID numbers (e.g., B08XQRT456). The company being certified provides these. One certificate can have multiple ASINs (e.g., different pack sizes).

Q: Is the Certification Results field required?

A: Optional in our system, but Amazon may need it to verify CPF badge eligibility. Analysts should fill it in when the data is available.
