We are missing dashboard view

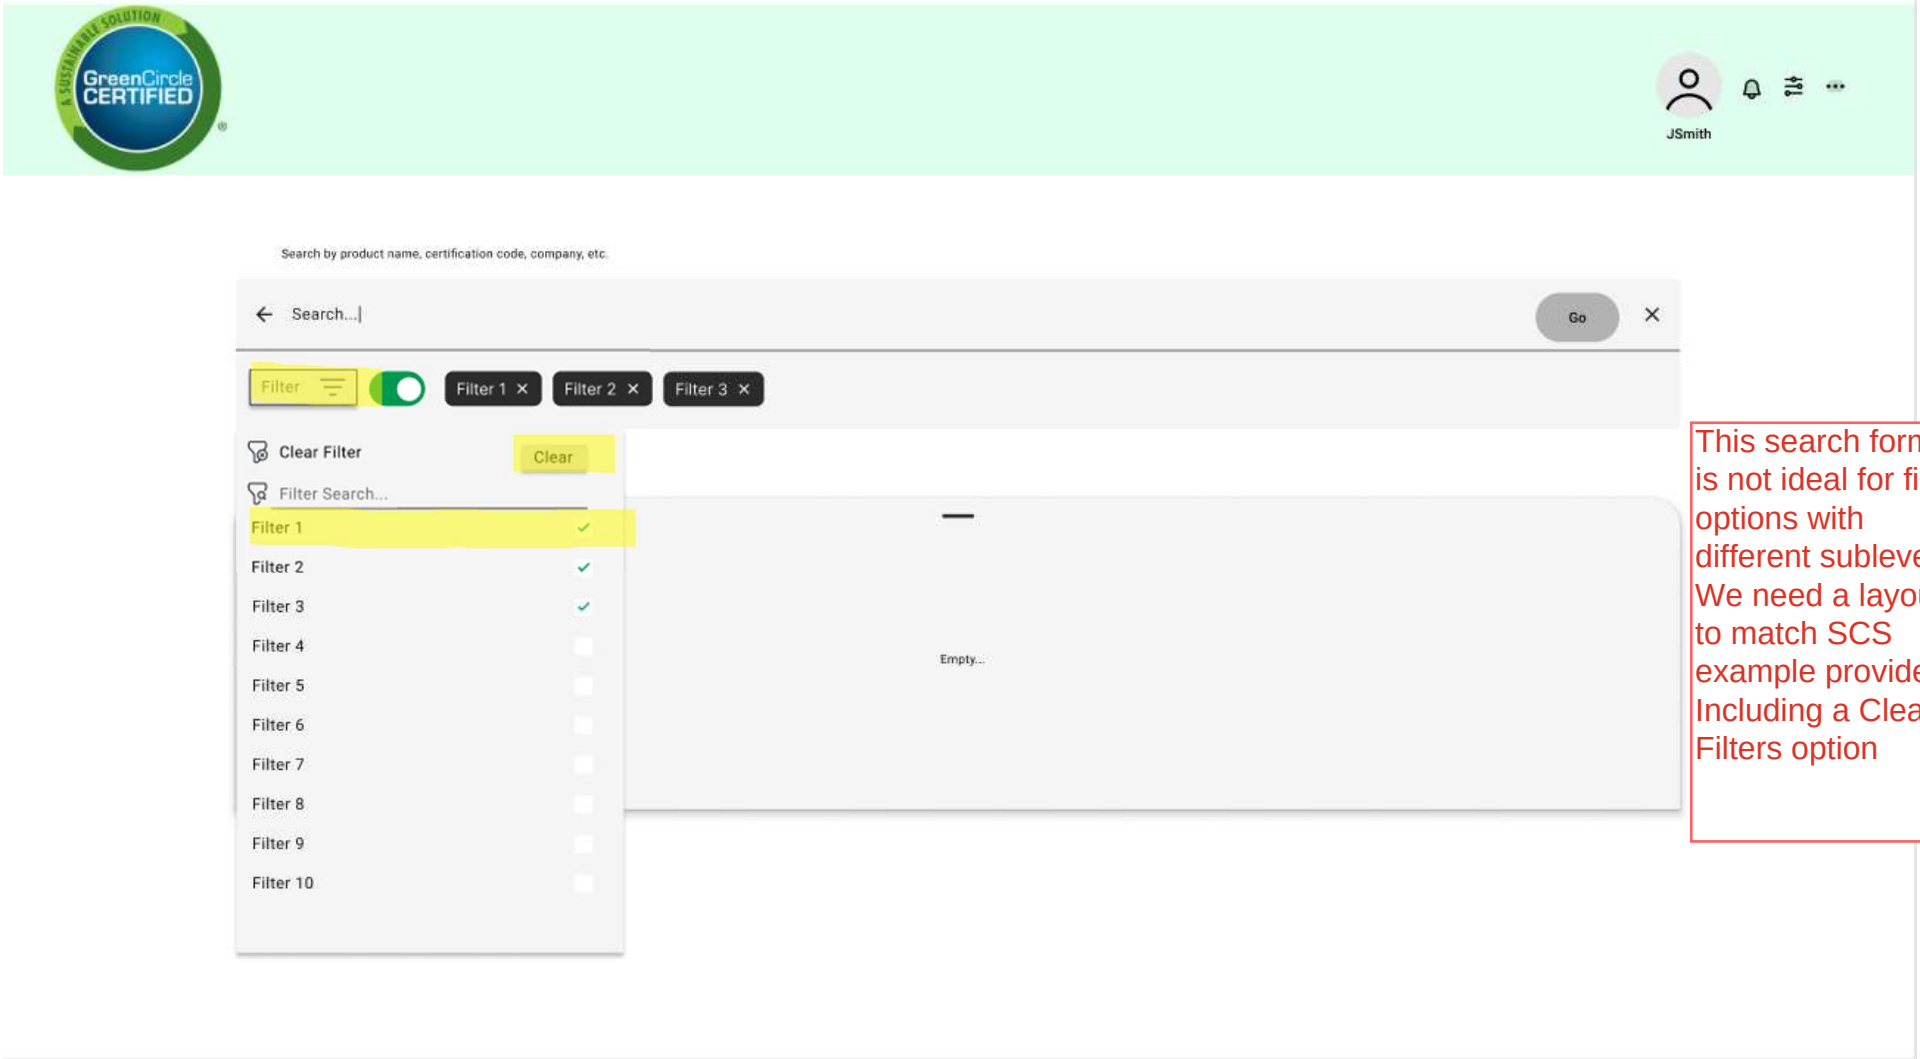

GCC Mockups

Anuki Consulting

Blank Search Screen

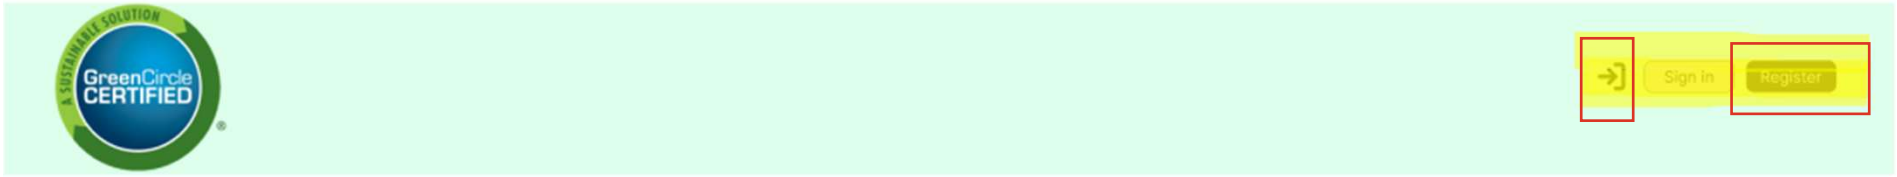

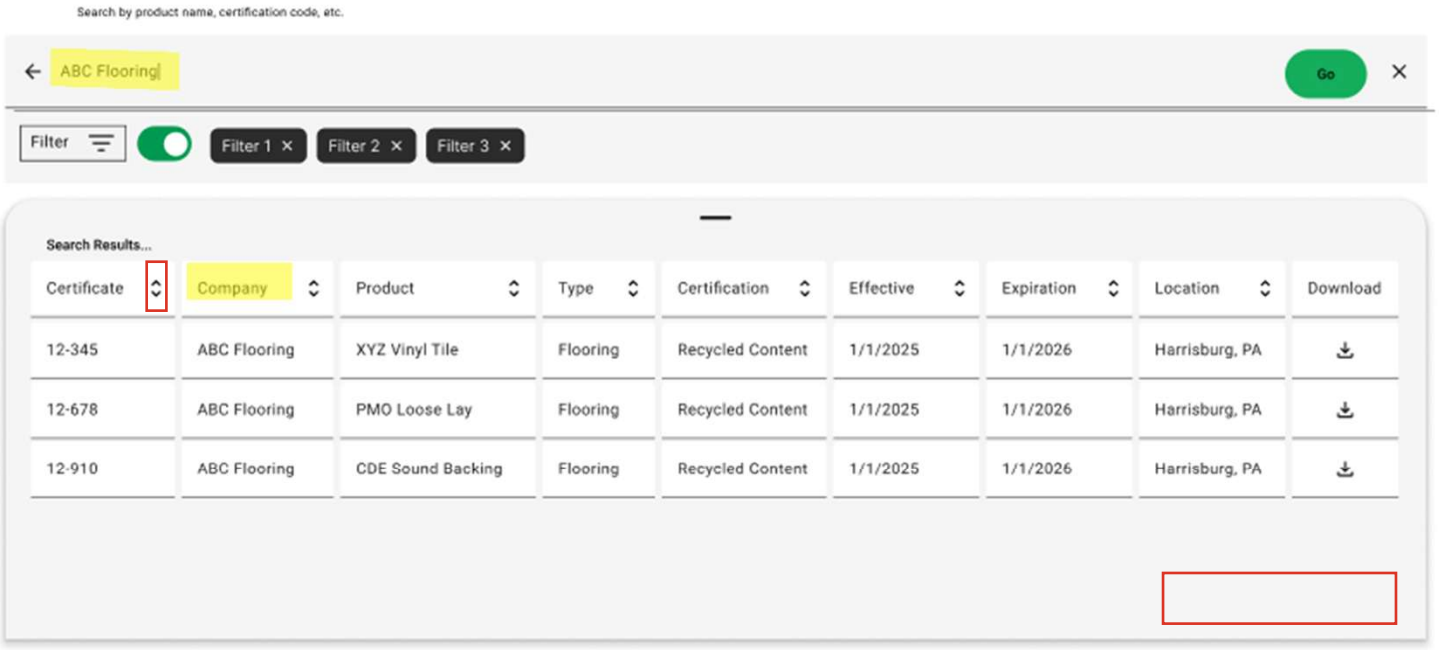

Filter Selection

This search format is not ideal for filter options with different sublevels. We need a layout to match SCS example provided. Including a Clear Filters option

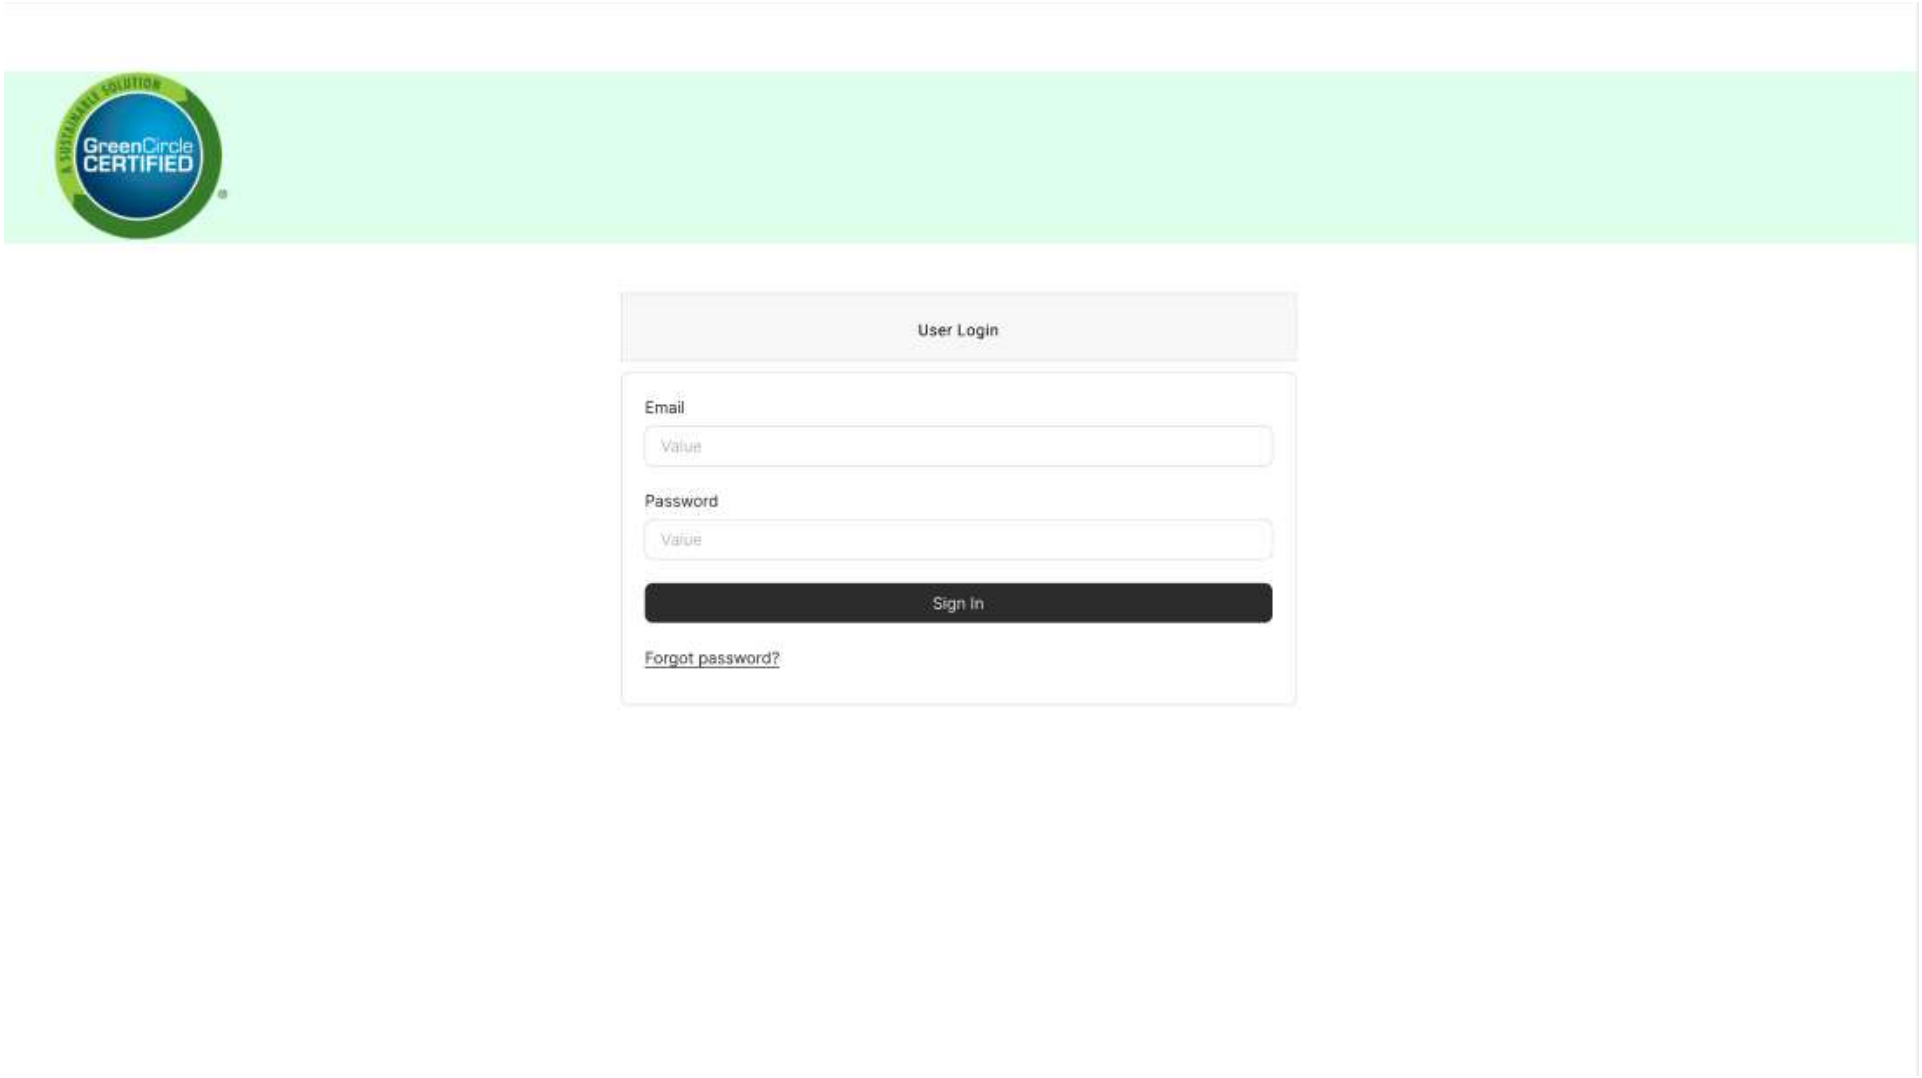

Public User List View

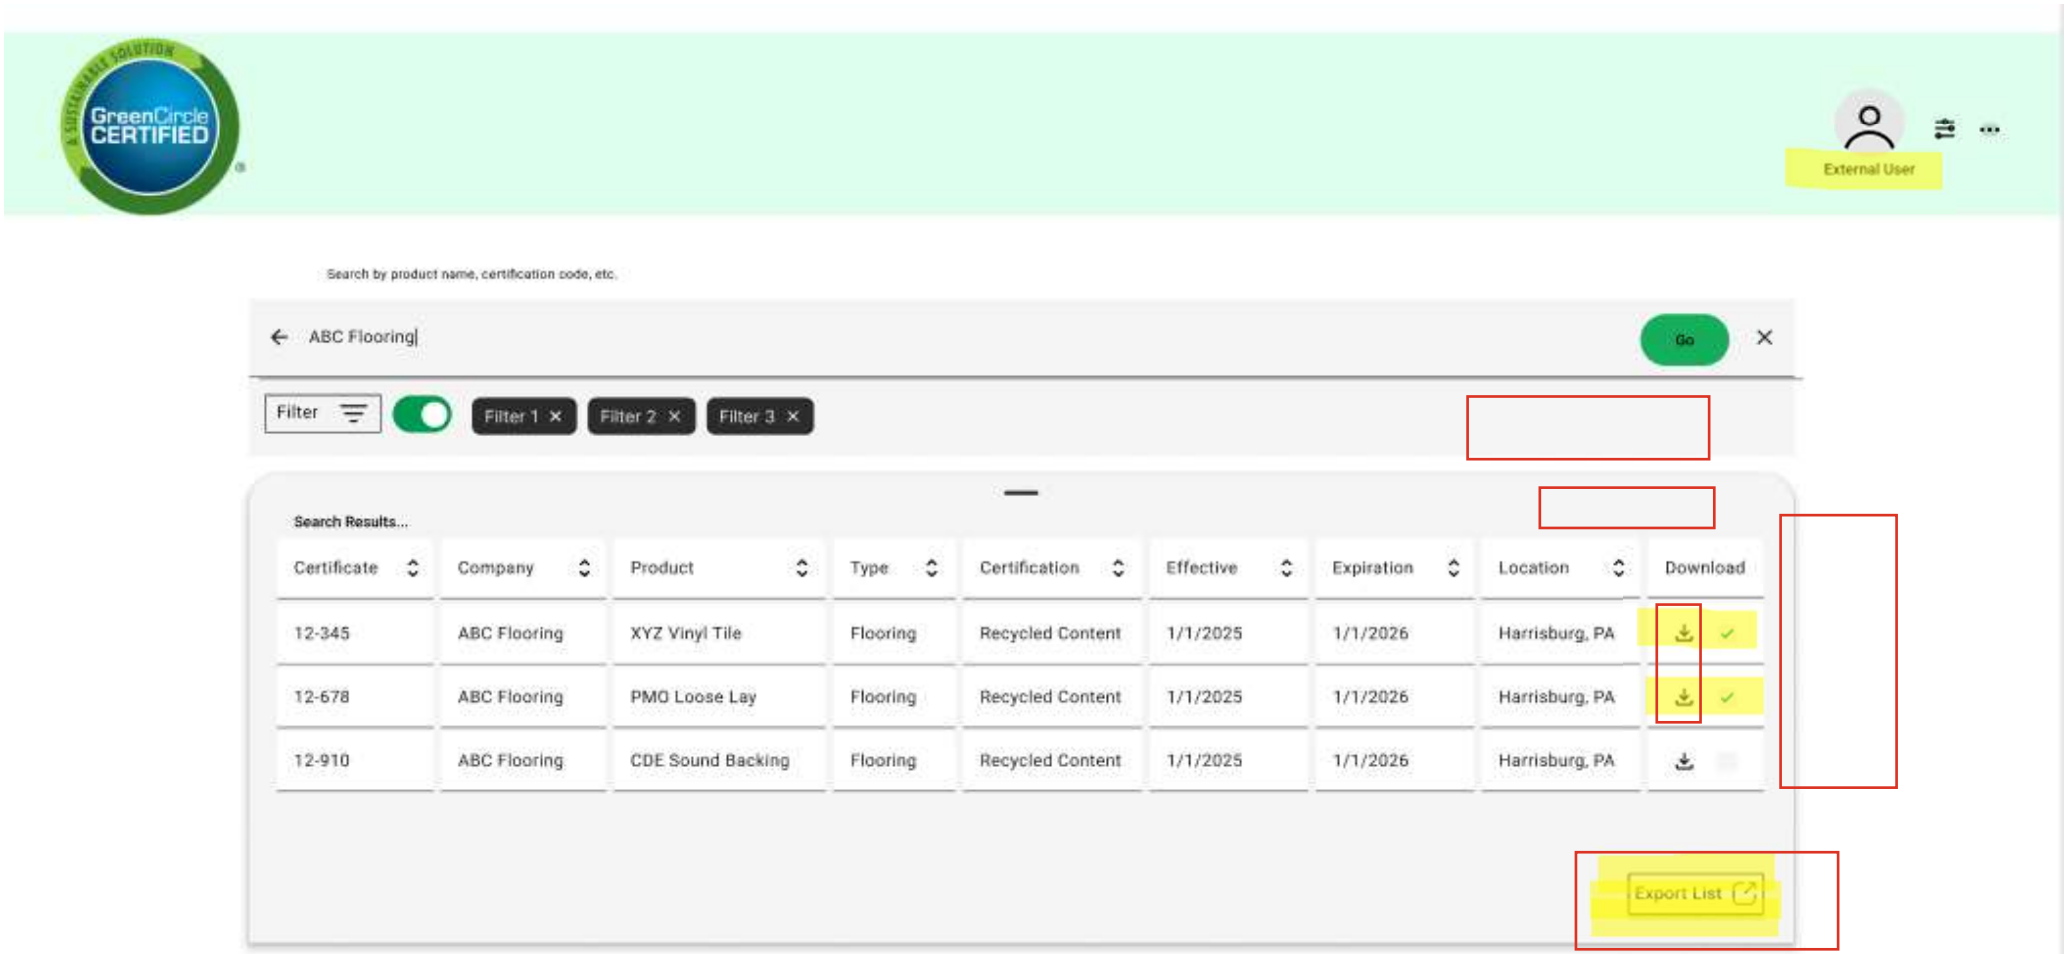

Can we make the listing less like Excel tables and more tiles (like SCS without product images) and we don't need click-in

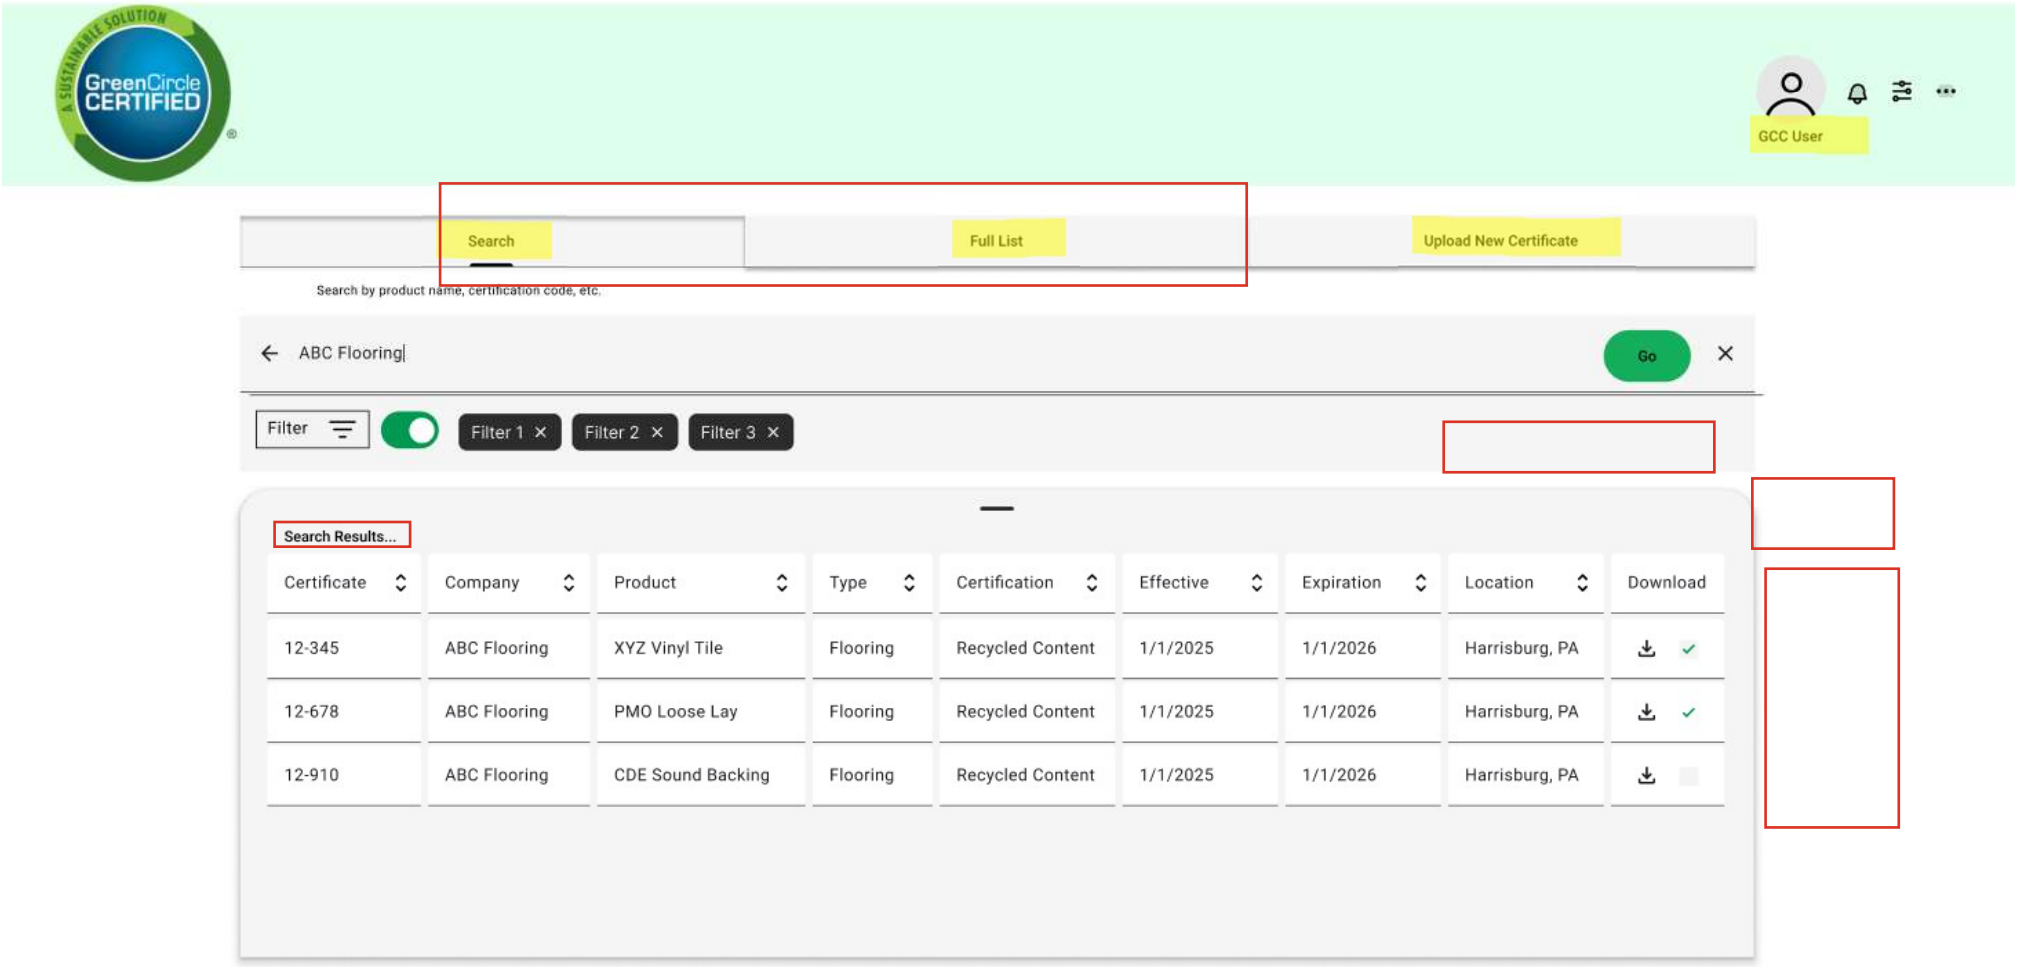

Login Screen

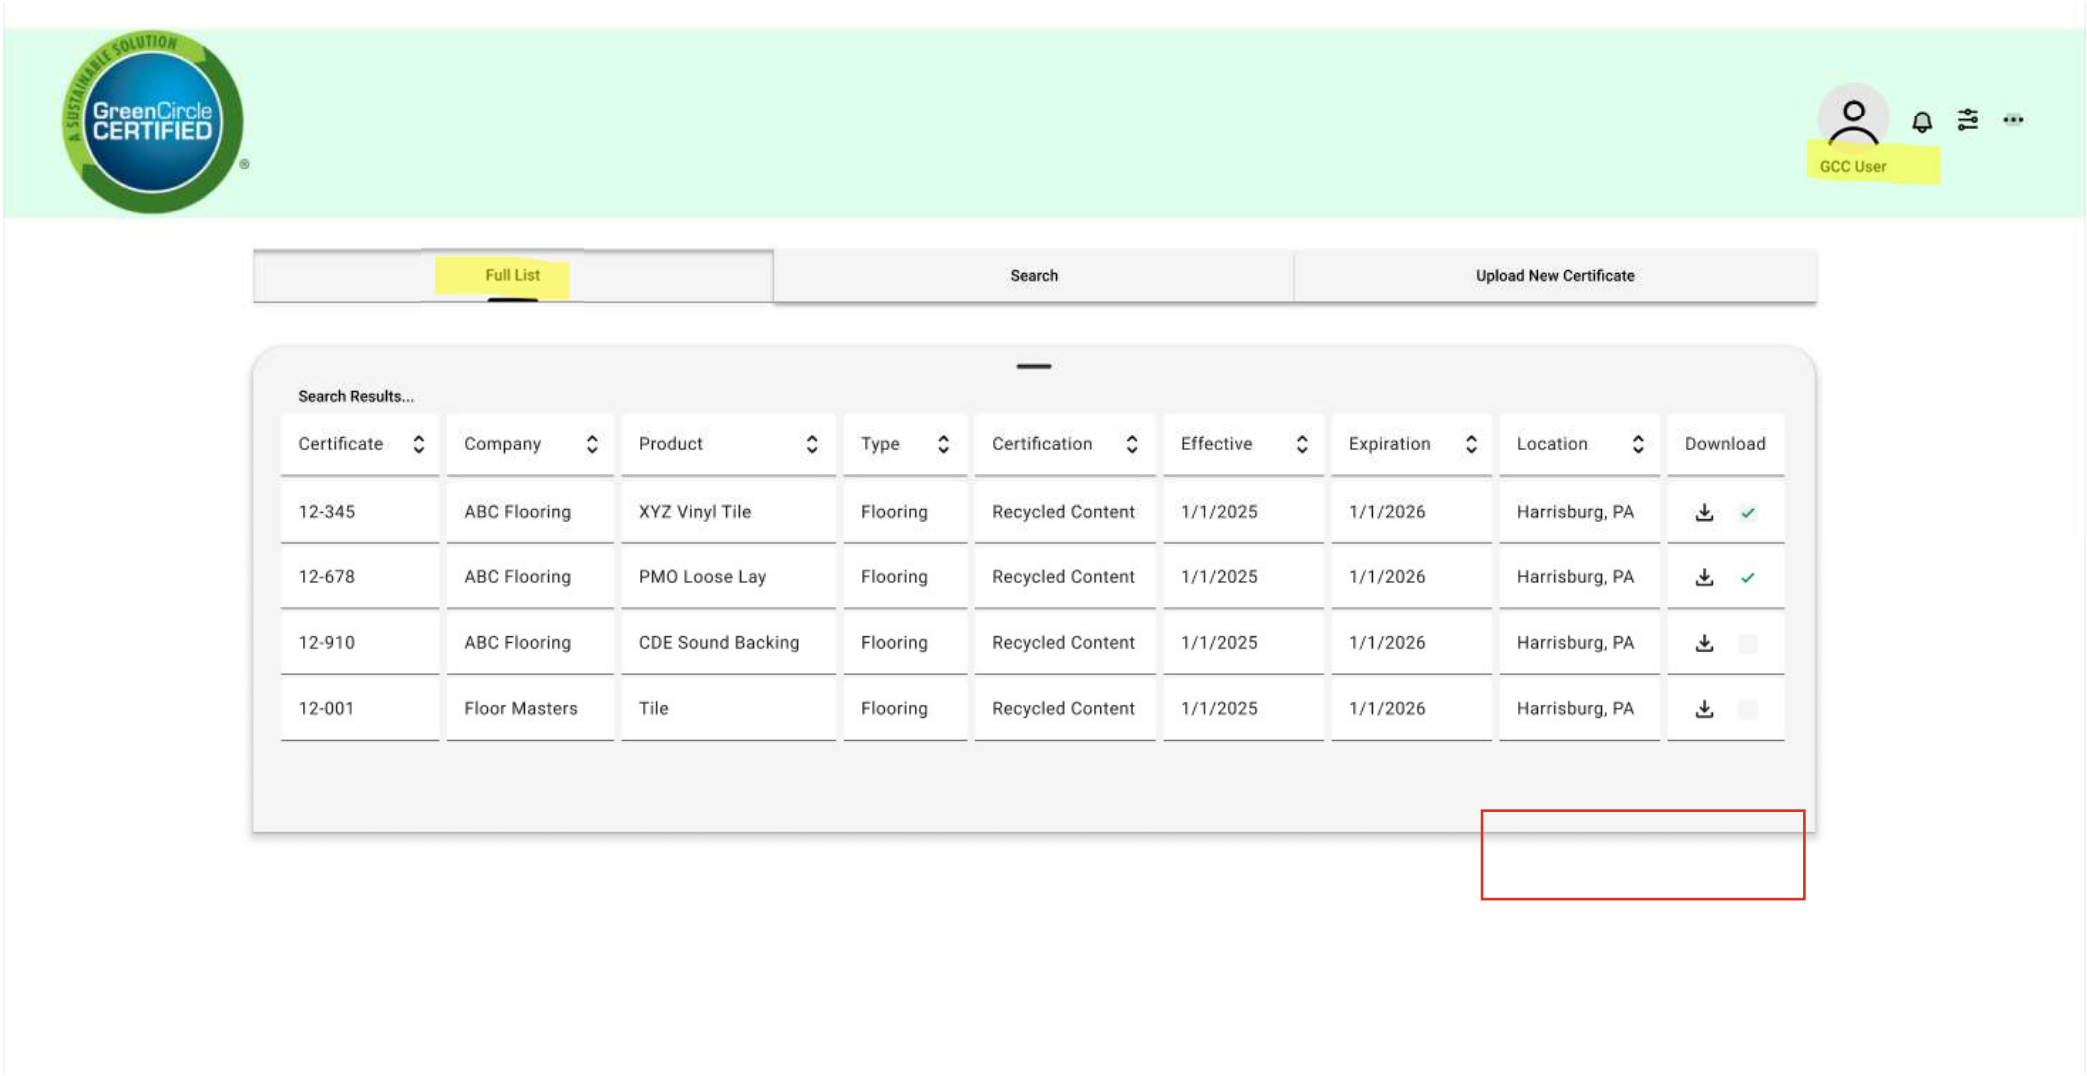

External User List View

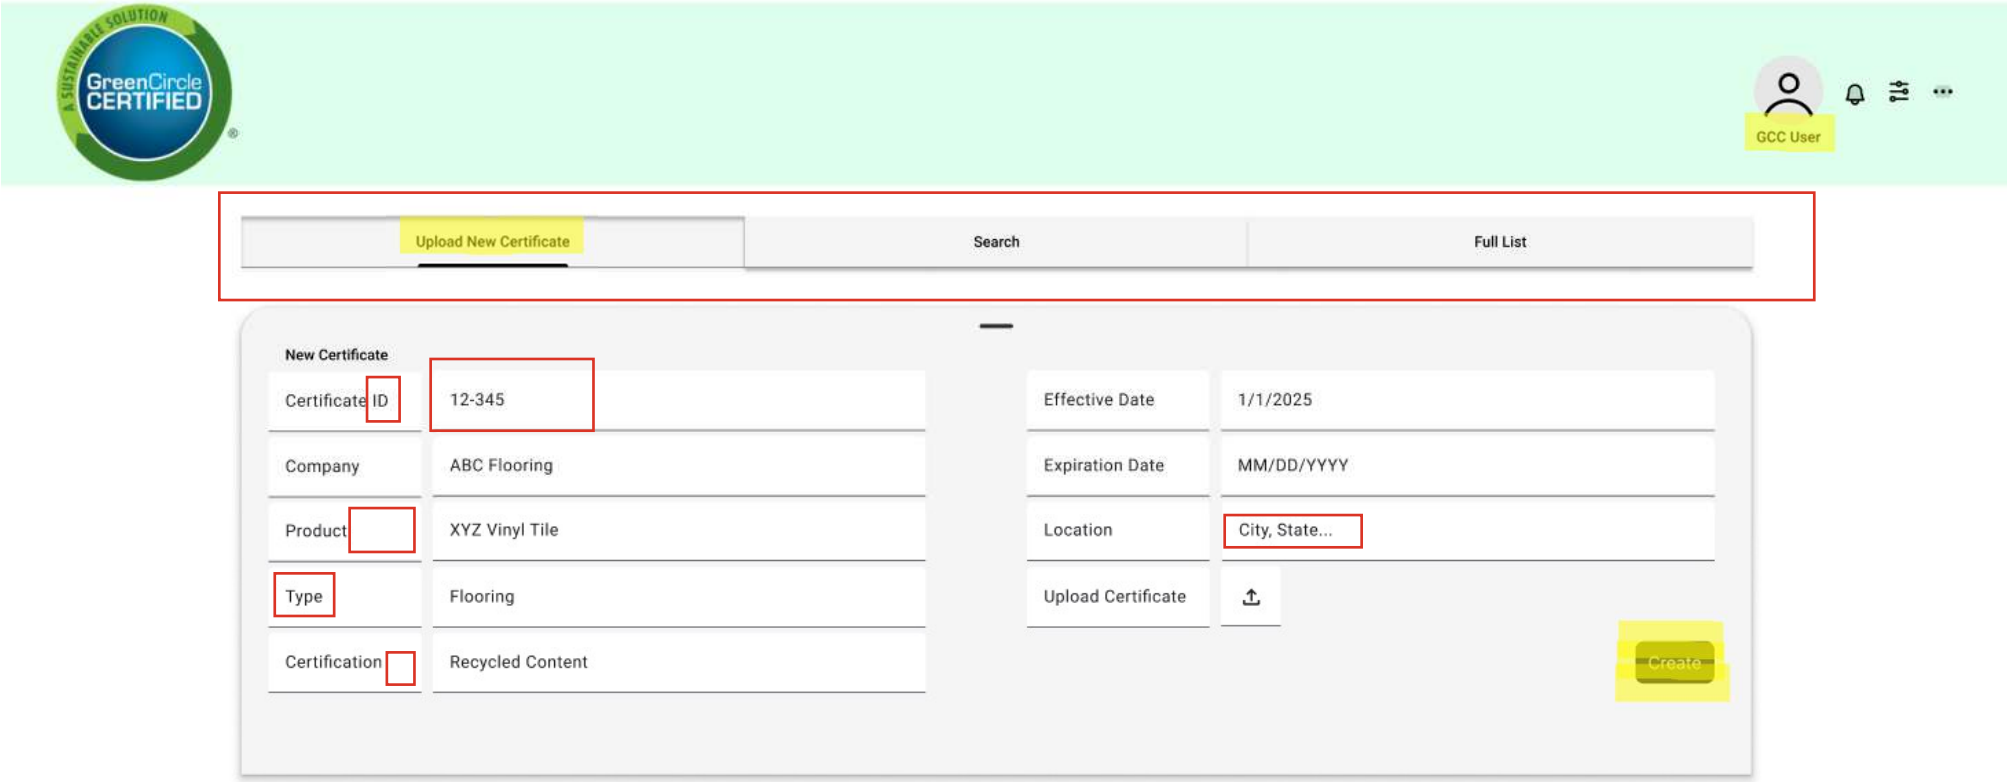

GCC User List View

GCC User Full List View

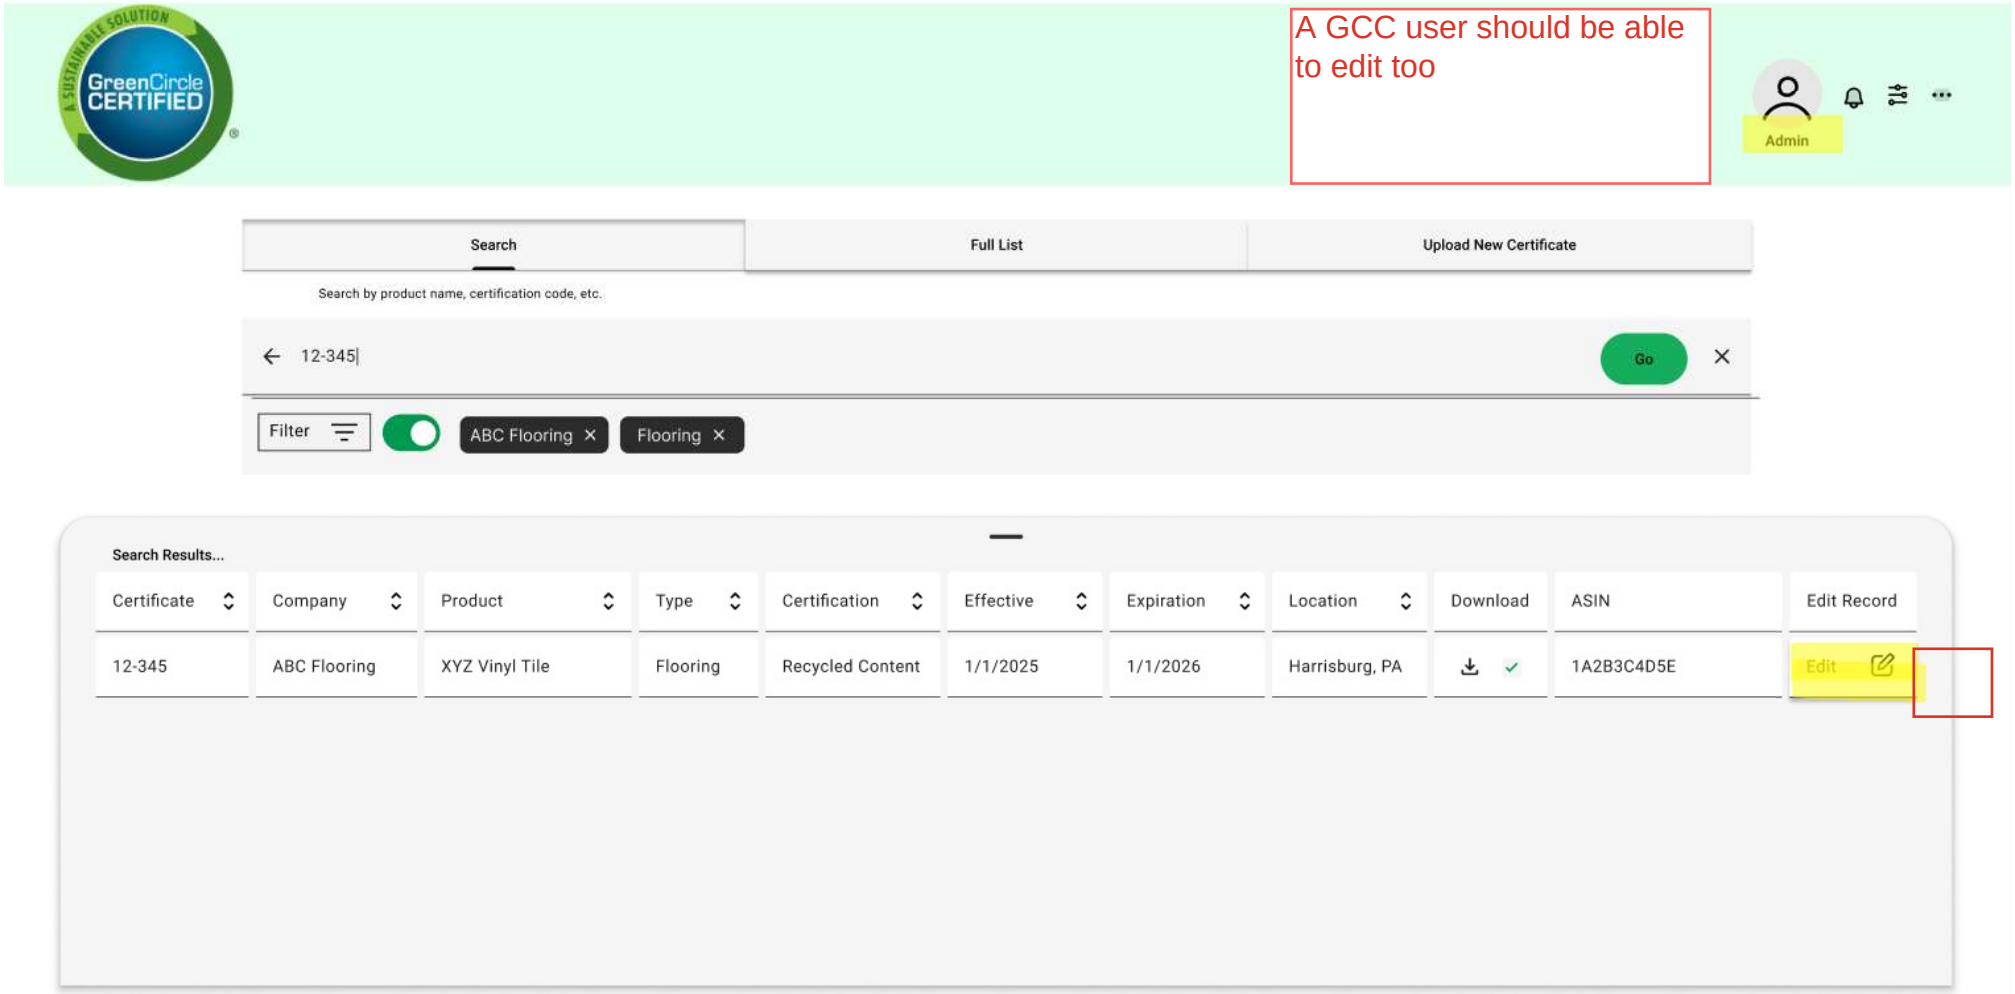

GCC User Upload New Certificate

We need to get aligned on the fields needed and the selections/functionality for each, because this is not comprehensive. Examples below
- Status (DRAFT - Internal, Draft - Client, Client Approved - Not Paid, Client Approved - Confidential, Client Approved - Paid, Hold, Expired)
>> The Client - Approved Paid is the only status that makes a cert available in public database
- Will need fields for each Amazon field (ASINs, Marketplace ID, etc.). Need to figure out how handling ASIN upload
- External Tags
- Internal Tags

Should get you user access to see this experience today. Want to make sure there is dropdown search and ability to add more. Need dropdown items defined

Admin List View

What about Admin user access permissions screen (user creation, user access, field addition/edits, etc.)

Admin Edit Record View

A GCC user should be able to edit too
